

Environmental Policy

As an international shipping company, we are acutely aware of the environmental impact of our activities. We are thus fully committed to the pursuit of “earth-friendly transportation” as well as enthusiastic participation in environmental protection activities, under our corporate slogan, “We love SEA (Safety, Environment, Activity)”.

Action commitments

- 1. With a firm determination to achieve totally safe operation, we establish a target for “zero” marine accidents including oil spills, which may have a great impact on the marine and global environment.**
- 2. We further enhance environmental protection activities by setting our own targets, above and beyond legislative environmental rules and regulations.**
- 3. We set environmental objectives and goals, and evaluate and review them periodically in an effort to continuously improve our environmental management system.**
- 4. We make all possible efforts to prevent pollution, including the active introduction of new technologies that can reduce air and marine pollutants.**
- 5. We enthusiastically promote activities to conserve resources and energy, and minimize and recycle waste.**
- 6. We endeavor to ensure all of our staff attain a greater awareness of the need for environmental protection in line with our environmental policy through instruction, training and other activities.**
- 7. We make available to the public updates to our environmental policy.**
